idea

June 2023

1 Idea and website

The idea we had, was we wanted to have a website that could tell me whether it was beach weather or not. Unforutnatly we couldnt find any form of live data, so we used data from 2022.

When presentet with the website you can interact with 2 buttons to the left under the title "Is it beach weather". If you click the first button "Check beach weather" it will look up the weather excatly a year ago. So if you cliked the button on the 02/05/23, you will be returned with data from 02/05/22. This is done thorugh a SQL query, and then based on the temperature last year it will say either yes or no, and return a picture.

You will also have to choice if you click the button under named "Check wind and temperature" to have the temperature and wind for the current date, displayed in Celsius and m/s. We have furhter advanced this interaction so you also will be able to chose a date of your choice and, get the weather from the date of your choice. It is the interact button under the title "Get specific wind and temperature".
